

Project Proposal

Project Title

Shomman: Elder Protection and Support System

1. Introduction

In Bangladesh, many elderly parents do not receive proper care, financial support, food, or medical treatment from their children. Although there is a law that requires children to support their parents, many elderly people do not report these problems because of social pressure, family reputation, and emotional attachment.

This project aims to develop a mobile application called **Shomman** that allows elderly people or trusted individuals to report elder neglect privately and safely. The system will help social welfare officers identify cases, monitor complaints, and take necessary actions.

2. Problem Statement

Many elderly people in Bangladesh suffer from neglect, lack of financial support, poor healthcare, and loneliness. Most of them do not seek legal help because they do not want to create conflict within the family or damage their social status.

As a result, many cases remain hidden, and the responsible authorities cannot take action.

3. Proposed Solution

The proposed system will provide a secure platform where:

- Elderly people can request help.
- Trusted reporters (neighbors, relatives, social workers) can submit complaints.
- Evidence such as photos, audio recordings, or descriptions can be uploaded.
- Social welfare officers can review and monitor cases.
- Complaints can be tracked until resolution.

The system will support both reporting and welfare monitoring.

4. Objectives

Main Objective

To provide a simple and secure platform for reporting and monitoring elder neglect cases in Bangladesh.

Specific Objectives

- Enable private complaint submission.
- Help authorities identify neglected elderly people.
- Improve communication between citizens and social welfare offices.
- Support follow-up and monitoring of reported cases.
- Promote awareness of elderly rights and responsibilities.

5. Target Users

1. Elderly Parents
2. Family Members
3. Neighbors
4. Social Workers
5. Volunteers
6. Social Welfare Officers
7. System Administrators

6. Main Features

User Features

- User Registration and Login
- Elder Profile Management
- Anonymous Complaint Submission
- Upload Photo and Audio Evidence
- SOS Emergency Help Request
- Complaint Status Tracking
- Monthly Wellbeing Check Form

Trusted Reporter Features

- Report Elder Neglect
- Submit Evidence
- Follow Complaint Progress

Admin Features

- Complaint Management Dashboard

- Case Verification
- Risk Level Assignment
- Welfare Visit Scheduling
- Case Status Updates
- Report and Analytics Generation

7. Technology Stack

Frontend

- Flutter

Backend

- Firebase Authentication
- Firebase Cloud Messaging

Database

- MySQL

Storage

- Firebase Storage

8. Expected Outcomes

- Hidden elder neglect cases can be identified more easily.
- Elderly people can seek help safely and privately.
- Social welfare officers can manage cases more efficiently.
- Awareness of elder rights will increase.
- Support for implementing existing elder care laws.

9. Future Scope

- Integration with government welfare services.
- AI-based risk assessment.
- Video consultation with social workers.
- National elder support network.
- Location-based emergency assistance.

10. Conclusion

Shomman is a social impact project designed to protect elderly people and support their well-being. The system provides a secure and practical way to report elder neglect, monitor cases, and connect citizens with social welfare services. This project can contribute to improving the quality of life of elderly people in Bangladesh.
